

DCS PRODUCTION POSTAGE PRINTING SOLUTION

INNOVATIVE DOCUMENT METERING

Hasler's unique Production Postage Printing solution transforms the way high volume mailing production is currently handled, reducing mailing and document handling costs, and increasing mailroom productivity. A key component of this process is the efficient combination of Hasler's DCS with its Production Postage Printing (EM150) software solution. A high-speed metering solution, the EM150 applies postage directly onto letters or other documents after the mailing document file has been created with the postage visible through a window envelope.

APPLY POSTAGE WITH YOUR PRINTER

Available as a standalone high volume Production Postage Printing solution, or as a module that is part of an overall mailing output management software system, the EM150 enables you to process high volume mail runs such as letters, statements, invoices, etc. – without using a mailing machine. The resulting postage is created and applied to the document at the time of printing at speeds independent of your folder/inserter or current system.

1

DCS transforms raw data or formatted data received from a variety of sources within your organization into professional, easy-to-read business documents ready for printing.

2

EM150 applies postage directly onto letters or documents at the time of printing. It also adds the Intelligent Mail® Barcode (IMB) to each mailpiece for tracking convenience.

3

EM150 allows your mail to move into the mailstream faster and more efficiently by eliminating a point of failure common with traditional high-speed meters.

HASLER
America's better choice.®

MAXIMIZE EFFECTIVENESS

The EM150 Production Postage Printing solution is perfect for mailers with high-speed inserting systems and supports up to 10,000 documents/hour. In addition, this system performs mixed weight processing and reduces mailing operating costs. It fully eliminates the traditional time consuming metering step, substantially speeding up document creation for transaction mailers, commercial print and fulfillment houses, third-party mailers, and any mailers with print and insert functions.

COST CONTROL

With the EM150 you can now control the costs of your mail preparation process because you will never have to order and replenish costly ink cartridges, since the postage is printed directly on the document. The system also provides the ability to reprint single documents or batches when mistakes occur. Finally, unused postage will be refunded electronically by the USPS® at 100% of value.

Benefits of EM150

- Delivers the professional image of metered mail
- Co-mingle jobs for better presort discounts
- Eliminates operating and ink costs associated with postage meters
- Requires no inventory of Permit or Prepaid envelopes
- IMB ready for sorting, tracking and USPS® compliance

SPECIFICATIONS

System Requirements

OS	Windows® Server 2003
DVD Drive	Yes
Hardware*	P4 3.0 Ghz to XEON 2.8 GHZ
Processors*	1 +
Hard Disks*	RAID 0 or higher recommended
Memory*	2048 MB to 8 Gb
Typical System	Dedicated PC
Modem	Internal, to be used with customer mandatory analog line
USB 2.0 Port	
Database	SQL Server 2005, Express or STD Edition
Database Space	Depends on data and volume
Printers	Windows® printer driver
Ethernet	Internet access required
SMTP Mail Server	Used to receive email alerts/reports
Postage Account	Required for postage funds

* Based on the actual version of DCS used

System Components

- USPS® and FIPS approved Postal Security Device (PSD)
- Document input and output managed by DCS core components
- OneCode™ service and associated Intelligent Mail® Barcode (IMB).

Indicia

Format	Mail class, postage designation, zip code, mailing date, postage amount, IBI Lite DataMatrix barcode, OneCode™
Refund	100% for postage not sent
